

IN THE SPECIFICATION

Please amend the specification as follows.

The paragraph beginning at page 2, line 7, is amended as follows:

Figure 1 shows an application of an echo cancellation system according to an embodiment of the present invention;

The paragraph beginning at page 2, line 8, is amended as follows:

Figure 2 shows an acoustic echo cancellation unit according to an embodiment of the present invention;

The paragraph beginning at page 2, line 9, is amended as follows:

Figures 3A and 3B show a method for detection of real-time errors and fast reconvergence according to an embodiment of the present invention; and

The paragraph beginning at page 2, line 11, is amended as follows:

Figure 4 shows a processing system according to an embodiment of the present invention.

The paragraph beginning at page 3, line 7, is amended as follows:

Figure 1 shows an application of an echo cancellation system. Shown in Figure 1 are speakerphone 102 and acoustic enclosure 150. Speakerphone 102 is a communications device that allows one or more users to talk on the phone at once. Speakerphone 102 can be stand-alone, or can be part of a larger system, such as a video conferencing system. Speakerphone 102 can be implemented in a device dedicated to communications, or can be part of a system that performs many other tasks, such as a general purpose computer. Acoustic enclosure 150, as shown in Figure 1, represents the enclosure within which speakerphone 102 operates. For example, acoustic enclosure 150 can be a conference room, a car, or the like.
